"Isolation and structure of two gastrin/CCK-like neuropeptides from
"Isolation and structure of two gastrin/CCK-like neuropeptides from
Neuropeptides 14:145-149(1989).
-!- FUNCTION: Changes the frequency and amplitude of contractions of
the cockroach hingut. Stimulates muscle contraction of hindgut.
-!- SIMILARITY: Belongs to the gastrin/cholecystokinin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Preventing or inhibiting,progression of Alzheimer's Disease - comprises use of recombinant DNA encoding an antibody specific for the N- or C-terminus of an amyloid-beta peptide.

Example 1; Page 47; 58pp; English.

The present sequence represents a peptide epitope derived from beta-amyloid precursor protein peptide. The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprising a recombinant bNa molecule containing a gene encoding a recombinant antibody end-specific for the Vereminns or an amyloid beta peptide, operably linked to a promoter which is expressed in the central nervous system. The recombinant antibody molecules prevent the accumulation of beta-amyloid opeptides in the extracellular space, interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises a method for treating a neurological disease or a central nervous system (CNS) disorder. The method involves displaying a therapeutic molecule capable of treating the neurological disease or CNS disorder on a viral display vehicle. The viral display vehicle is then introduced into the olfactory system of a subject to treat the disease or and disorder. The method of the invention is useful for preventing, treating and diagnosing neurological diseases or CNS disorders, such as: Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; viral infections of the brain, brain tumours, lyssomal storage diseases; sequence represents a peptide which was used in the invention
disease by inhibiting the interaction of beta-amyloid peptides mediating Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced complement activation and cytokine release involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating or diagnosing neurological diseases of the central nervous system, e.g. Alzheimer's disease, comprises displaying a polypeptide or diagnostic agent on viral display vehicle and introducing or detecting

                                                           The present invention relates to antigenic products (A), comprising a dendritic polymer built on a core molecule which is at least difunctional to provide branching and containing up to 16 terminal functional groups to which an antigenic peptide, that comprises an epitope of a deposit-forming polypeptide involved in plaque-forming disease, is joined by response against a deposit-forming polypeptide involved in a plaque-forming disease or disorder, e.g. Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, Creutzfeldt-Jakob disease, Kuru, Gerstmann-Straussler-Schainker disease, fatal familial insomnia, scrapie or bovine spongiform encephalitis, by administering the antigenic product to a subject in need of it. The present sequence is one such antigenic peptide, which was used to

The present invention describes an antibody that is tree-end specific and is targeted to: (a) the free N-terminus of amyloid beta-peptide, where the free N-terminus of amyloid beta-peptide, where the first amino acid of amyloid beta-peptide is aspartate; (c) the free N-terminus of the amyloid beta-peptide free N-terminus of the amyloid beta-peptide fragment; (d) the free C-terminus of the amyloid beta-peptide Abetal-39, Abetal-40, Abetal-41 or Abetal-43; or (e) to the free C-terminus of N- and/or C-terminus of the amyloid beta-peptide fragment; (2) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide fragment; (2) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide has nootropic and carrier. The antibody targeted to amyloid beta peptide has nootropic and carrier. The antibody targeted to amyloid beta peptide has nootropic and incomposition comprising the antibody therapy. The antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzhaimer's disease, or a disease or disorder characterised by amyloid beta deposition (e.g. mild cognitive impairment, cerebral amyloid angiopathy of amyloid beta peptide or its fragment.

Co for delaying, inhibiting or suppressing accumulation of amyloid beta peptide are derived from beta amyloid beca peptide or its fragment. Amyloid beta peptide are derived from beta amyloid beca peptide or the present invention.

(APP). The present sequence represents an amyloid beta peptide which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody that is targeted to amyloid beta peptide, or its fragment, useful for treating a subject having Alzheimer's disease, or a disease or disorder characterized by amyloid beta deposition, e.g. cognitive

The present invention describes an immunising composition (A) comprising:

(a) an antigenic product (I) which induces an immune response against the beta-secretaes cleavage site of amyloid precursor protein (APP); and (b) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (I) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (I) a carrier displays the beta-secretaes cleavage site of APP; (2) a carrier displays to the containing the beta-secretaes cleavage site of APP; (2) a chain Ab, on its surface; and (3) a composition containing FB. (A) has concropic and neuroprotective activities, and can be used in vaccines or passive immunisation. (A) inhibits the cleavage of APP and so prevents the formation of beta-secretaes cleavage of APP and so prevents the formation of beta-secretaes cleavage of APP and so prevents concretaes against the beta-secretaes cleavage of APP and so prevents that contains the antigen-binding part of an Ab directed against the cleavage site, or a filamentous phage that displays such an Ab (as a single-clear nequence represents a beta-amyloid (Abeta) peptide which is cased in the exemplification of the present invention.
                                                                                                                                          immune response; beta-secretase cleavage site; amyloid precursor protein;
APP; nootropic; neuroprotective; vaccine; passive immunisation;

The invention relates to a method of treating a neurological disease or disorder of the central nervous system (CNS). The method involves displaying a therapeutic molecule capable of treating the neurological disease or disorder of the CNS on a viral display wehicle and introducing viral display vehicle into a subject by applying an effective amount of the viral display vehicle displaying the therapeutic molecule to an CNS conflactory system of the subject. The method is useful for treating a conflactory system of the subject. The method is useful for treating a confractory system of the subject. The method is useful for treating a contrological disease or disorder of CNS such as a plaque-forming disease such as Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome; senility, multiple myeloma, Sarapie, bovine spongiform cencephalopathy (BSB), kuru, Creutzfeldt-Jakob disease (CDD), Gerstmann-cencephalopathy (BSB), kuru, Creutzfeldt-Jakob disease (CDD), Gerstmann-cencephalopathy (BSB), kuru, Creutzfeldt-Jakob disease (CDD), Gerstmann-cencephalopathy (BSB), kuru, Creutzfeldt-Cakob disease (CDD), Gerstmann-concephalopathy (BSB), kuru, Creutzfeldt-Cakob disease (CDD), Gerstmann-concepted diseases which cause neurodegeneration and are manifested by enzyme deficiencies and multiple sclerosis. The invention is also used in the preparation of vaccines. The present sequence is human beta amyloid peptide (bera AP) anti-agrregating epitope. This sequence is used to illustrate the method of the invention.

The present invention relates to preparations (1) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-framinal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-terminal truncated beta-amyloid peptide, SEQ ID 40.
                                                                                                                                                                                  N-terminal truncated beta-amyloid peptide, SEQ ID 27.

The invention comprises a method for providing a labelled target protein/peptide. The method involves contacting a chemical compound with affinity support. The moving impurities in the reaction mixture surrounding cleaving to support to which the chemical molecule is bound, and cleaving or eluting the molecule from the affinity support to obtain irreversible or reversible affinity tagging residue, labelled target protein or labelled peptide. The method of the invention is useful for labelling a target protein/peptide or high throughput screening assay. The method of the invention is useful for identifying agents that modulate the activity or characteristics of a target protein/peptide such agents are useful as pharmacceuticals. The present amino acid sequence represents an affinity tag peptide of the invention.
                                                                                                                                                                                                                                                                     Providing labeled target protein or target peptide by contacting chemical compound with affinity support, removing impurities in reaction mixture surrounding affinity support, cleaving or eluting chemical molecule from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibody molecule, antibody; beta-A4 peptide, Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer: Gisease; motor neuropathy; Down's syndrome; Creuzzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine for the prevention, or as a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-terminal truncated beta-amyloid peptide, SEQ ID 28.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nootropic, Neuroprotective, Vaccine; beta Amyloid; amyloid precursor protein; APP; Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       à
                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Asp-CS-G-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (I) a nucleic acid molecule coll comprising the vector of (2); (4) preparing (I), comprising the vector of (2); (4) preparing (I), comprising (I) coll comprising the host cell of (3) under conditions that allow synthesis of (1) an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), concleic acid of (1), vector of (2) or host cell of (3); (7) optimising (I), concleic acid of (1), vector of (2) or host cell of (3); (7) optimising (1), comprising the resulting Fab optimised clones; (10) expressing cagainst Abeta4, (9) identifying optimised clones; (10) expressing confinised clones; (11) preparing a pharmaceutical composition prepared by method (8). (I) has composition and/or treatment of a disease associated with many objection. The antibody molecule of a myloidepenesis and/or treatment of a disease associated with many objection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease distinceration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease; HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                  New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                          Kretzschmar T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The present sequence represents a peptide derived from beta-amyloid precursor protein (beta-APP, see AAW70863). The peptide is a beta-amyloid precursor protein (beta-APP, see AAW70863). The peptide is a beta-amyloid peptide and is used to produce a monoclonal antibody. The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprising a recombinant DNA molecule containing a gene encoding a composition anyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The recombinant antibody molecules prevent the accumulation of beta-amyloid peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's disease by inhibiting the interaction of beta-amyloid peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced complement activation and cytokine release involved in the inflammatory process
                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Beta-amyloid precursor protein; beta-APP; beta-amyloid peptide; antibody; amyloid deposit; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Preventing or inhibiting progression of Alzheimer's Disease - comprises use of recombinant DNA encoding an antibody specific for the N- or C-terminus of an amyloid-beta peptide.
amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This peptide is based on the N-terminal fragment of beta-amyloid peptide (beta-AP) and was fused to the minor coat protein of fd phage. This peptide may be used in the method of the invention. The invention provides an agent for treating a plaque forming disease. The polypeptide is displayed on a display vehicle and is capable of eliciting antibodies capable of disaggregating the aggregating protein and/or of preventing aggregating of the aggregating protein. This reduces formation of amyloid plaques in the brain of victims of plaque forming disease, presumptomatic Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, scrapie, bovine spongiform encephalopathy (BSE), kuru, Creutzfeldt-Jakob Disease (CJD), Geretmannstreussler-Sheinker Disease (GSS) and fatal familial insomnia (FFI)
                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating amyloidgenic disease such as Alzheimer's disease, BSE or CJD comprises presentation of plaque derived antigens or epitopes on a display vehicle, and introducing the vehicle into the recipient.
